

## **Soltex Polybutene Compatibility with Refrigeration Components**

Soltex Polybutenes are very clean burning and leave little or no residue on ignition. Soltex Polybutenes also depolymerize at temperatures approaching 300 °C to light monomers and oligomers that also burn cleanly.

Furthermore, any residual amounts of Soltex Polybutene are compatible with all types of refrigeration oils including paraffinic oil, naphthenic oil, polyalphaolefins and alkylbenzenes. Soltex Polybutenes offer complete or partial compatibility with a variety of vegetable based refrigeration oils as well.

Soltex Polybutenes are compatible with all common refrigerants including R-410.
